~/sshtermy — quick reference

>_ sshTermy

QUICK REFERENCE

SSH terminal with an AI copilot · Windows · macOS · Linux

Idea: Dominik Bornhäußer · v1.0 · As of November 2026

◆ EVERYWHERE

Ctrl + Space	command palette: goal, question, actions, hosts
F1	help for the current area
⇧F9	key bar with explanations
F10	manager ↔ terminal (sessions keep running)
F12	about & update
F12 › w / l	what's new / language
F11	full screen (own window)
Ctrl + Q	quit (asks if connected)

≡ CONNECTION MANAGER — F10

⏎	connect
n / e / d	new / edit / delete (Ctrl+Z: undo)
Space	mark (* = all), then e, v, d
/ · #	search · filter by tag
o / r / v	new folder / edit / move
← / →	collapse / expand folder
- / +	collapse / expand all
⇧↑ / ⇧↓	change the order
t	add a tunnel
c	create / copy an SSH key
q	edit quick commands
m / f / z	broadcast / network scan / schedules
w / g	workspaces / open folder as a grid
s / y	AI settings / sync between computers
i	import (ssh config, PuTTY, MobaXterm, Ansible, CSV)
l	session logs
a / b	choose color scheme / customize keys

▸ TERMINAL

Tab / →	accept ghost text
Alt + 1 … 4	insert follow-up (red ones twice)
Alt + 0	after a failure: why? & fix
F2	goal mode / agent
F3	ask AI
F4 / F5 / F6	tunnels / files (SFTP) / host overview
F9	quick commands (list)
⇧F1 … ⇧F8	run a quick command directly
Ctrl + F	search the scrollback
⇧F10	tab to its own window / back

▭ TABS

F7 / F8	previous / next tab
Alt + N / Alt + W	new tab / close tab
Alt + L	local shell (PowerShell, zsh ...)
Alt + T	tab list: ⏎ jump, 1...9 direct
Ctrl + R / D	(list) rename / duplicate
Alt + S	search in all tabs
⇧↑ / ⇧↓	(list) move the tab
right-click	tab menu · middle click closes

▦ SPLIT VIEW

Ctrl + T	choose a layout: 1 ... 7
Ctrl + arrow	switch pane
Alt + ⇧ + arrow	move the divider
Alt + Z	zoom pane / back
Alt + I	type into all panes
= / d / w	(picker) equal / dim others / workspaces
drag title	swap panes

◦ MOUSE

drag	select + copy, also in the panel
right-click	paste · on a link/IP: menu
Ctrl + *click*	open URL in the browser
⇧ + *drag*	select inside htop / vim
drop	upload a file from Explorer/Finder

I READING THE SCREEN

●	AI dot green: AI reachable
●	yellow: slow or fallback provider
●	red: AI unreachable (click: details)
✓ × !	tab: long command done · ! = color rule
PRODUCTION	red status line: prod/live in the name
`status nginx`	gray ghost text: Tab accepts
`rm -rf`	red: dangerous, ⏎ twice

Change keys: **b** in the manager (**l** = this computer only) · help: **F1** · plan mode, session logs and start options: manual (palette › Help).

◎ GOAL MODE — F2

⏎	start goal / run step
i	only insert (dry run)
e / s / r	edit / skip / suggest again
x	end the goal
↑ / ↓	choose a runbook
Ctrl+S	save as runbook
Ctrl+D	delete runbook
⇧⏎ / Ctrl+J	new line in the goal
Tab	mode: step by step → agent → plan first

◆ AGENT MODE — F2 → Tab

Esc	pause (typing in the terminal too)
?	give the agent an instruction
v	view the script or file (goal mode too)
⏎ ⏎	**allow a dangerous step**
s / r	(at the end) save as runbook / delete scripts
c / l	copy result / read all

Careful (default): only read-only runs on its own · **Normal** / **Full**: more on its own, only on connections with "Protection" off. Danger and secrets always wait.

◆ ASK AI — F3

⏎	send question (with terminal context)
↑ / ↓	choose a command card
1 … 9	insert command
a / c / u	run / copy / use fix after an error
z / Esc	explanation on/off / stop answer
n / f	new question / follow-up

◇ AI COMPANION — Alt+J

Alt+K	level: off · quiet · chatty · coach
m / l / r	mute topic / remember / recap
p / g	intent: plan / agent takes over

❯ COMMAND PALETTE — Ctrl+Space

type ⏎ / Tab	filter · start as goal / ask AI
user@host	quick connect (also telnet, COM3, winrm)
→ / ←	open folder › · ‹ value › next / back
"log" / "vendor"	AI analyzes output / command sets
MAC, IP / "topo"	find switch port / topology
Esc	back from folder / close

▤ FILES (SFTP) — F5

Tab	switch side (local ↔ server)
⏎ / *double-click*	open, view file (/ search, f follow)
← / *mouse back*	one level up
c / e / o	copy / your editor / default app
Space / *Ctrl+click*	mark (⇧+click: range)
Right-click	menu: permissions, path, cd here
F2 / y / s / v	rename / path / sort / preview
n / d / .	new folder / delete / hidden

⇔ TUNNELS — F4

⏎	start / stop (click works too)
a	start with the connection
o	open web service in the browser
n / e / d	new / edit / delete

▣ HOST OVERVIEW — F6

r / ⏎	query (CPU, RAM, disks, ports)
b	back up switch config + check rules
↑ / ↓ · d · v	pick state · diff · view
c · g · t · z	containers · limits · range · large
Alt+E / l	log view: n new · t time · b AI · w watch · s syslog

/ SCROLLBACK SEARCH — Ctrl+F

⏎ / ⇧⏎	older / newer match
Ctrl+E	error lines only
Tab	error list ↔ scrollback

» BROADCAST — m

Space / g / a	pick host / folder / all
Ctrl+S	check, then ⏎
← / → · z · c	host column · enlarge · copy
{{name}}	variable, asked before the run
k · p	AI checks per host · trial run on/off

▲ SAFETY

⏎ ⏎	**red command: confirm twice**
y	**allow risky · or hold ⏎**
form	"Protection" off: test and lab systems only
_command	leading space: not logged
palette	"Lock now" · "Master password" · "Audit"

Change keys: **b** in the manager (**l** = this computer only) · help: **F1** · plan mode, session logs and start options: manual (palette › Help).
